

FALCONEER Technologies, LLC

VIRTUAL WORKFORCE FOR THE POWER AND COGENERATION INDUSTRY

POWER AND COGENERATION / BOILER-FURNACE

For your power plant, FALCONEER can deliver:

- Asset optimization and advanced diagnostic desktop solution
- A solution to your aging workforce and knowledge loss
- Turn existing data into better actions and decisions
- Patented, turnkey, time saving solution

Overall benefit is to improve plant economic performance and profitability:

- Optimize megawatt output
- Improve availability and reliability
- Reduce O&M and lower energy costs
- Increased safety
- Increased thermal efficiency/optimized heat rate
- Increased Profit Potential
 - ✓ Increased employee productivity
 - ✓ Easier collaboration
 - ✓ Faster response, reduced operational variability

A Real-Time Process Performance Auditing System

- Advisory screens and reports will allow the engineer to review all the RIGHT information WHEN needed.
- Eliminate labor intensive, plant performance spreadsheets with an automated and unified system for plant data collection, analysis, trending and reporting.
- Monitor assets, manage dynamic situations, and optimize operations for performance as well as regulatory and contractual compliance.

Prime Operational Targets:

- Achieve maximum efficiency at the lowest cost
- Real time statistical process control
- Leak detection
- Continuous sensor and proactive fault analysis
- Sensor and process validation

What customers are saying about FALCONEER's Patented Solution:

- "It's not big brother, it's helping our engineers watch our backs." - **Niagara Generation** Power Plant Manager
- "FALCONEER detected a problem which in the past cost hundreds of thousands of dollars a day." - **BASF** Sr. Engineer
- "We saved \$30,000.00 with one advisory alert." - **FMC** Operations Manager
